SOVEREIGNDESK

Function code reference: all 36 commands

Live terminal sovereigndesk.onrender.com
Web demo adityashukla2615.github.io/sovereigndesk
Code github.com/adityashukla2615/sovereigndesk

HOW TO TYPE A COMMAND

Type the code and its arguments in the command bar at the top, then press **Enter**. Upper or lower case both work.

- `[ ]` is optional; `A|B` means pick one.
- `25BP` = 25 basis points = 0.25%.
- `200B` = $200 billion; `50000CR` = ₹50,000 crore.
- `10D` = over 10 days; `7D` = a 7-day auction.
- `INR+5` = rupee 5% weaker; `VIX+10` = volatility index up 10 points.

KEYS

`/`	Jump to the command bar (never type `/` into a command)
`Alt+1 … Alt+4`	Pick panel 1–4; the next command opens there
`Alt+← → ↑ ↓`	Move to the neighbouring panel
`Alt+Enter`	Focused panel full screen, and back
`F1`	Explain the focused panel
`Alt+T`	Teach mode on or off
`Tab · ↑ ↓`	Complete a suggestion · walk your history

US Treasury market and the Fed

9 codes

CODE	TYPE THIS	WHAT IT DOES
UST	`UST`	US Treasury par curve, live, against today's official close
PY	`PY` `PY 10Y` `PY [tenor]`	Price–yield for one bond: duration, convexity, DV01 and how well the approximations fit
FED	`FED`	Fed corridor, EFFR, bank reserves, ON RRP and the QT pace
HIKE	`HIKE 25BP`	Raise the fed funds target range (IORB and ON RRP move with it)
CUT	`CUT 25BP`	Lower the fed funds target range
QT	`QT 95B` `QT OFF` `QT 95B | QT OFF`	Set the Fed's monthly balance-sheet runoff ($bn a month), or stop it
TIC	`TIC`	Major foreign holders of Treasuries (TIC data), live holdings after any sales

SHOCK	`SHOCK JP 200B 10D LONG`
	`SHOCK JP 200B [10D] [SHORT|BELLY|LONG]`
	`SHOCK FED 50BP VRR VIX+10`
	`SHOCK FED 50BP [NONE|VRR|OMO|SWAP|HIKE] [VIX+10]`
		Holder sale: a foreign holder (JP, CN, UK … any holder in `TIC`) sells Treasuries over some days, from the short end, the belly or the long end.
		Fed shock: a Fed move runs through to India's money market; pick RBI's response and an optional jump in volatility.

DEBT	`DEBT`	US federal interest cost over 10 years: today's curve against the simulated one

IN India's money market and the RBI

12 codes

CODE	TYPE THIS	WHAT IT DOES
CALL	`CALL`	India's call money market today: rounds, WACR, high/low, who borrows and who lends
WACR	`WACR` `WACR REALISTIC` `WACR [POLICY|REALISTIC]`	WACR (the overnight rate) inside RBI's corridor: the fitted map, real and simulated days; set the mode
REPO	`REPO +25BP` `REPO -25BP`	Change the policy repo rate; the SDF and MSF move with it at once
CRR	`CRR 3.5`	Change the cash reserve ratio (%) from the next fortnight and see the liquidity drain
VRR	`VRR 50000CR 7D` `VRR 50000CR [7D]`	Variable rate repo auction: RBI lends to banks (injects liquidity)
VRRR	`VRRR 50000CR 7D` `VRRR 50000CR [7D]`	Variable rate reverse repo auction: RBI borrows from banks (absorbs liquidity)
LAF	`LAF`	RBI's liquidity adjustment facility: SDF, MSF, VRR/VRRR outstanding and auctions
NDTL	`NDTL`	The SYNTHETIC banks: NDTL, CRR, SLR, MSF capacity, call positions and limits
GSEC	`GSEC`	India's G-sec curve and how a repo change passes through it, by maturity
TAXCAL	`TAXCAL`	Advance-tax and GST liquidity calendar: real WACR − repo by day and the tax days ahead
CCIL	`CCIL`	How call money trades on NDS-CALL and TREPS and market repo settle through CCIL
MPC	`MPC`	Next RBI MPC decision: probabilities from three models, their backtest, today's inputs

X Across both markets

5 codes

CODE	TYPE THIS	WHAT IT DOES
LINK	`LINK` `LINK OMO` `LINK [VRR|OMO|SWAP|HIKE]`	The US → India chain: Fed → US 10Y → foreign investor flows → rupee → RBI → liquidity → WACR
CORR	`CORR`	The fed funds market side by side with India's call money market
SPRD	`SPRD`	India 10Y against US 10Y: the spread, real history and simulated days

IMPACT	`IMPACT RETAIL +100BP`
	`IMPACT BUSINESS IMPORTER INR+5`
	`IMPACT [RETAIL | BUSINESS [SHOP|IMPORTER]] [+100BP] [INR+5]`
		What a shock means for a bond portfolio (RETAIL) or a small shop or importer (BUSINESS). Profiles are ILLUSTRATIVE

REPLAY	`REPLAY TAPER2013` `REPLAY GILT2022` `REPLAY TAPER2013 | DASH2020 | GILT2022 | HIKE2022 | ADVTAX`	Replay a real episode, the model driven by what moved, against what happened: 2013 taper tantrum · March 2020 dash for cash · 2022 UK gilt crisis · 2022–23 Fed hikes · advance-tax squeezes

SYS Controlling the terminal

10 codes

CODE	TYPE THIS	WHAT IT DOES
HELP	`HELP` `HELP SHOCK`	List every function, or explain one
TEACH	`TEACH`	Teach mode on or off: the economics behind every panel
RESET	`RESET`	Clear every shock and policy change; back to the real starting data
PAUSE	`PAUSE`	Freeze the simulation clock
RESUME	`RESUME`	Restart the simulation clock
SPEED	`SPEED 10X`	Simulation speed, as a multiple of one sim-minute per second
SAVE	`SAVE myrun`	Save this run as a scenario: its seed, its start and every command that changed the markets
LOAD	`LOAD` `LOAD myrun`	List saved scenarios, or replay one from its start to where it was saved
LAYOUT	`LAYOUT SAVE desk1` `LAYOUT desk1` `LAYOUT DEFAULT` `LAYOUT [SAVE|DELETE] name | LAYOUT DEFAULT`	Save the four panels as a named layout, restore one, or list them (kept in this browser)
EXPORT	`EXPORT CSV` `EXPORT PNG`	Download the focused panel: its data as CSV, or its charts as one PNG image

> **A first tour**
>
> `UST → FED → SHOCK FED 50BP → LINK → WACR → REPLAY GILT2022 → IMPACT RETAIL +100BP → RESET`

Good to know

- **Live terminal:** everyone connected shares one market, so a shock you send moves it for all. Type `RESET` when you finish.
- The free live site sleeps after 15 idle minutes; the first visit after that takes a minute or two. The first `MPC` after a wake-up takes about a minute.
- Saved scenarios (`SAVE`) are wiped when the live site restarts or sleeps; layouts stay in your browser.
- The web demo plays back recorded replies, so only the recorded variants of each command work there; `SAVE`, `LOAD` and `SPEED` need the live terminal.
